President Hiroshi Sakata

# INTRODUCTION

Sakata has more than 100 years of experience in providing growers with innovative and value-added genetics. While our early reputation was built around world-class seed production, the quality of our vegetative assortment is second to none and continues to expand.

In today's market, the key to success is making the connections that work. In the commercial chain from breeder to consumer, it is important that each link understands the needs of the other, to make their contribution to the end product – because the success of one is dependent on the success of another. Sakata connects with the links throughout the chain, to create products that offer added value for the distributor, plug producer, grower, retailer and the end consumer.

Added value is bred into our products. Find out how SunPatiens® gives back to nature, and about the amazing weather tolerance of BeautiCal Petchoas. See the latest developments in Osteospermum Cape Daisy. Our attribute guides will help you to determine the best assortment for your success.

Connect with us on social media, by e-mail, or just simply give us a call! Connect with Sakata's vegetative assortment and let our top quality genetics build your business!

Calipetite® is a breakthrough in Calibrachoa breeding. It is a naturally compact mound of colour that grows into a dense ball without any need for growth regulators or supplemental lighting. This eye-catching series is ideal for colour bowls, and has irresistible retail sales appeal.

- The most compact and uniform series on the market
- No PGR's: naturally compact, economical and environmentally friendly.
- Dense mounding habit is ideal for shipping and strong retail presentation
- Blooms under very short days
- Very suitable for production of 'triopots'
- High pH tolerance (7.2+) prevents yellowing of foliage

**NEW! LIME**

- Fresh new designer colour, great for combination pots

**NEW! APRICOT DREAM**

- Attractive special colour with yellow orange tones

**NEW! BLUE SPLASH**

- Splash of special blue coloured flowers with a nice bright pattern

## SUNPATIENS®

*The all-weather impatiens*

These remarkable plants represent a breeding breakthrough: robust, sun-loving Impatiens that thrive in full sun or part shade and deliver continuous colour from spring, all through summer and right up to the first harsh frosts of winter. Unaffected by Downey Mildew, SunPatiens® are an excellent alternative to seed Impatiens, offering non-stop colour and robust coverage in semi-shaded areas.

SunPatiens® Vigorous is the SunPatiens® series most used for landscape and mass plantings. The new generation of SunPatiens® Vigorous is strong, well branched and with well-controlled vigour, even in warmer climates. SunPatiens® Vigorous are recommended for use in (mass) beds and large containers, and are ideal for economical, long-lasting ground cover.

## NEW! WHITE

- This great outdoor performer has shiny dark leaves which gives a nice contrast with the paper White flowers. In spring and under cooler circumstances this white flower can show a little red eye which will disappear under warmer conditions

Mix containers

14-17 cm

# SUNPATIENS® REDUCING ENERGY CONSUMPTION

*More performance with less energy*

**SunPatiens® is well known for its excellent heat tolerance, and its stunning performance under the most sunny and warm conditions – but the full story of SunPatiens® is much ‘cooler’!**

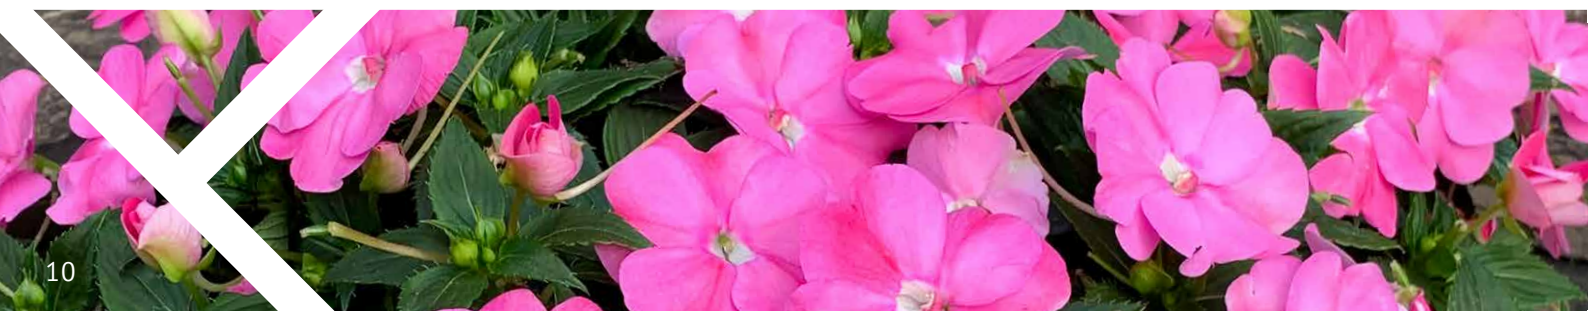

SunPatiens® tolerates much cooler temperatures than most regular Impatiens New Guinea, offering great advantages for both consumers and growers. For consumers, the better tolerance of cooler conditions offers a great advantage for a broader use of SunPatiens as a true bedding plant in cooler climates, and longer into Autumn.

For growers, the better cool tolerance offers multiple advantages. Firstly, and very importantly in current times, SunPatiens® can and should be grown around 5°C cooler than New Guinea Impatiens, saving considerably on heating costs. Secondly, the cooler conditions help to keep the plants more compact, resulting in a better plant habit and less need for PGR's – the best basis for transplanting outdoors and better garden performance.

In research conducted at the LfULG (Sächsisches Landesamt für Umwelt, Landwirtschaft und Geologie) in Dresden, a wide range of New Guinea Impatiens and SunPatiens® were grown under two different growing conditions. One sample was grown at an average day temperature of 14°C and the other at an average day temperature of 19°C, which is standard growing temperature for New Guinea Impatiens. All SunPatiens® varieties in the test scored higher in overall impression at 14°C compared with plants grown at 19°C. Conclusive evidence that SunPatiens® really is cool!

#### **Recommendations for growing**

Keep temperature at 16 - 18°C in the first week (approximately) after transplanting. This will allow the roots to get a good start in the pot. After plants are established, temperature can be lowered to an average day temperature of 14-15°C. SunPatiens® are quite flexible and can accept temperatures lower than 14°C as long as the average temperature is kept at 14°C. Temperatures below 12°C are not recommended for a long period of time.

# SUNPATIENS® IS THE LANDSCAPER'S SECRET TO SUCCESS!

The truly unique genetic background of SunPatiens® delivers unsurpassed garden performance like no other flowering annual. What makes them so special?

- Strong roots that take hold quickly and are resistant to soil pests
- Plants that thrive under high heat, rain and humidity
- Full-sun to shade versatility
- Continuous, non-stop blooming from Spring through Autumn
- Carefree, low-maintenance plants (low fertiliser requirements, self-cleaning, less weeds)
- Strong insect and disease resistance (not impacted by Downy Mildew, no snails)

*NOTE: Download the complete Landscaper's Guide at [sunpatiens.eu](http://sunpatiens.eu)*

## SUNPATIENS® GIVES BACK TO NATURE

SunPatiens® has been giving back to nature since the early 2000s, when Sakata Seed Corporation, the breeder of SunPatiens®, reached an agreement with the Indonesian Government (IAARD) in relation to the botanical species of Impatiens from which SunPatiens® is partly derived. The agreement that was reached between Sakata and Indonesia was a forerunner of the current Nagoya Protocol. This protocol determines rights and obligations for the countries that signed it. This means that for every SunPatiens® plant that is sold, a contribution is made to Indonesia for local research into the maintenance of the biodiversity in that country. When you buy SunPatiens®, you give back to nature.

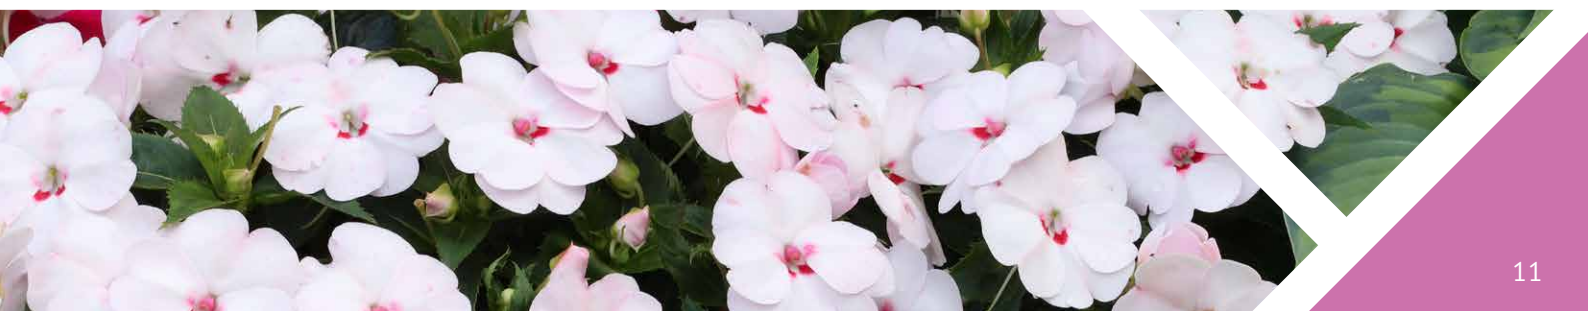

### Air Purifying

An outstanding side-effect is that SunPatiens® is beneficial for its immediate surroundings. Independent research has proved that SunPatiens® absorbs nitrogen dioxide 3 to 4 times better than the average plant. Planting SunPatiens® can therefore contribute to air purification. In countries with a warm climate, it has even been demonstrated that SunPatiens® can contribute to air cooling.

SunPatiens® genetics are developed in joint cooperation with Indonesia (IAARD)

SCIENCE INNOVATION NETWORKS

MECARDONIA

# MAGIC CARPET™

Yellow

A tough, durable plant that is loaded with a continuous supply of bright yellow flowers all season long. Magic Carpet™ features a semi-mounding habit that is eye-catching at retail. Because it is both frost and heat tolerant, it is an ideal season extender for early and late sales.

- Extremely early to bloom
- Bright yellow blooms blanket plants all season long
- Durable along garden paths, in high traffic areas and between pavers
- Superb in baskets and as a component plant in mixed containers
- Versatile in production - can be produced in any size from 6 cm pack up to hanging baskets

'Bred in cooperation with INTA'

The new generation for the pot and patio! Petchoa 'BeautiCal®' has a mounded plant habit with large flowers, and is incredibly weather tolerant with exceptional rain resistance. Popular for its unique colours and abundant flowering, BeautiCal® is an ideal combination of Petunia and Calibrachoa traits. Grower, retail and consumer friendly, it produces a mass of colour all summer long.

- Intergeneric hybrid with compact-medium mounding habit
- Very good weather and rain tolerance
- Large showy flowers till end of the Summer
- Better mildew resistance: long lasting plant till end of the Summer
- Suitable for cultivation in 10.5-12 cm pots and mix containers
- Highly suitable for patio, terrace, balcony and garden beds
- Self-cleaning and less sticky than other petunias

**NEW! PINK DIVA**
